Attenuator Trucks

“We set the Standards of NJ DOT Certified Attenuator Trucks on the Road Today”

TMA Attenuator Trucks For Sale, Rent & Custom-Built.

We recognize that all TMA Attenuator Trucks are not built equally on the road these days. It is no longer safe or sufficient to use a simple flatbed truck with a mounted attenuator on federal highways.

S.P.A. is dedicated to providing premium quality TMA Trucks that perform at the highest standards required in work zone safety applications.

S.P.A. TMA Attenuator Trucks are among the best designed, fabricated, and serviced in the USA today and meet **NJ DOT Certification** and meet **MASH Guidelines** for TMA Truck Attenuators.

NJ DOT has very stringent standards for highway safety for road work at S.P.A. has met the requirements for those standards.

All controls are mounted in the cab so that the TMA and arrow board can be deployed without the driver ever having to leave the cab. Using S.P.A. equipment enhances the safety of the work and work environment.

TMA TRUCK FACTS. "THE BASICS"

- S.P.A. ensures that when our attenuators are deployed they are approximately **12 inches off the ground** in order to be at the proper height for impact from a vehicle.
- S.P.A. installs all of our attenuators in order to **guarantee proper deployment and function.**
